Alphascript Publishing Nov 2009, 2009. Taschenbuch. Book Condition: Neu. 220x150x10 mm. Neuware - Messenger ribonucleic acid (mRNA) is a molecule of RNA encoding a chemical 'blueprint' for a protein product. mRNA is transcribed from a DNA template, and carries coding information to the sites of protein synthesis: the ribosomes. Here, the nucleic acid polymer is translated into a polymer of amino acids: a protein. In mRNA as in DNA, genetic information is encoded in the sequence of nucleotides arranged into codons consisting of three bases each. Each codon encodes for a specific amino acid, except the stop codons that terminate protein synthesis. This process requires two other types of RNA: transfer RNA (tRNA) mediates recognition of the codon and provides the corresponding amino acid, while ribosomal RNA (rRNA) is the central component of the ribosome's protein manufacturing machinery 168 pp. Englisch.
