The problems that most frequently arise in the design of such works are treated from a practical point of view; and the chief object of the writer throughout has been to meet the actual requirements of the hydraulic engineer in his daily practice. In great measure these problems will have reference to the uniform flow of water in pipes and channels, and in all such questions it must be admitted that nothing like a mathematical accuracy is by any means attainable; but it will be the desire of every engineer to employ a method that shall approximate as closely as possible to the ascertainable truth. On the other hand, such calculations will often have to be repeated many scores or hundreds of times for the purposes...
