Book Condition: New. Publisher/Verlag: Springer, Berlin | Open-Architecture Computer Systems | It has been almost 5 years since the inauguration of the TRON project, a concept first proposed by Dr. K. Sakamura of the University of Tokyo. The TRON Association, which was founded as an independent organization in March 1988, has been taking over the activities of the earlier TRON Association, which was a division of Japan Electronic Industry Development Association (JEIDA). It has been expanding various operations to globalize the organizations activities. The number of member companies already exceeds 100, with increasing participation from overseas companies. It is truly an awaring historical event that so many members with the same qualifications and aims engaged in the research and development of the computer environment could be gathered together. The TRON concept aims at the creation of a new and complete environment beneficial to both computer and mankind. It has a very wide scope and great diversity. As it includes the open architecture concept and as the TRON machine should be able to work with various foreign languages, the TRON is targetted to be used internationally. In order for us to create a complete TRON world, at though there are several TRON products already on the market, continuous and aggressive participation from as members together with concentration as further development are indispensable. We, the TRON promoters, are much encouraged by such a driving force. | 1: TRON System Architecture.- TRON Universal Language System.- Design of MTRON: Construction of HFDS.- 2: ITRON.- HI8:A Realtime Operating System with µ-ITRON Specification for the H8/500.- MR7700: An Implementation of µ-ITRON Specification on 16-bit Single-Chip Microcontroller.- An Integrated Embedded Systems Software Development Environment for ITRON.- 3: BTRON.- TACL: TRON Application Control-Flow Language.- Natural Language Translation Services in BTRON.- A Study on Video Manager of the BTRON...
