

Strategic Plan for Federal Research and Monitoring of Ocean Acidification

Filesize: 1.2 MB

Reviews

This sort of publication is everything and made me seeking forward and much more. Better then never, though i am quite late in start reading this one. I am easily could possibly get a delight of reading through a created pdf.

STRATEGIC PLAN FOR FEDERAL RESEARCH AND MONITORING OF OCEAN ACIDIFICATION

Createspace, United States, 2015. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.Human industrial, transportation, and agricultural activities have caused global atmospheric concentrations of carbon dioxide (CO₂) to increase from a pre-industrial average of 280 parts per million (ppm) to the current value of approximately 400 ppm (IPCC AR5 2013). Atmospheric CO₂ concentrations are now higher than experienced on Earth for more than 800,000 years (Luthi et al. 2008), and the rate of CO₂ release into the atmosphere is likely unprecedented in Earth history (Kump et al. 2009; Honisch et al. 2012). Ocean carbonate chemistry is a natural buffering system, but this buffering capacity is being compromised as a direct result of CO₂ absorption by the oceans and to a lesser extent by the absorption of nitric acid(HNO₃) and sulfuric acid (H₂SO₄) at the sea surface (Doney et al. 2007). The oceans have absorbed approximately half of the anthropogenic CO₂ emissions from fossil fuel use and cement manufacturing over the past 200 years (Sabine et al. 2004). This oceanic uptake of CO₂ causes changes to ocean chemistry (Figure 1), including decreases in pH and carbonate ion (CO₃²⁻) concentrations, collectively known as global ocean acidification (Figure 2). Since the beginning of the industrial revolution, this uptake has caused a lowering of the surface ocean pH globally from about 8.2 to 8.1 (Caldeira and Wickett 2003; Feely et al. 2004; Caldeira and Wickett 2005; Feely et al. 2009), which corresponds to a 26 increase in hydrogen ion concentration, (H⁺, acidity). Reconstruction of past sea surface conditions suggest surface ocean pH has not been this low for at least 2 million years (Honisch et al. 2009). Orr et al. (2005) predicted an additional decrease in average global ocean surface pH of 0.3 to...
